Innovative
Capsule Endoscope

MiroView™ 2.0

Innovative Capsule Endoscope
• Higher Quality Images

MiroCam® captures and delivers exceptionally high quality images. With the highest resolution of 320x320, advanced optics, and auto lighting control, MiroCam® produces clear, bright images with deep visualization of the GI tract.

![Images of various digestive system regions: Esophagus, Stomach, Small Bowel, Tumor, Bleeding, Ulcer, Crohn’s, Angiectasia, Celiac]

• Longer Operation Time

A key clinical concern of capsule endoscopy is an incomplete examination (i.e. failure to image the entire small bowel due to a short operation time). MiroCam®’s 11 hour operation time effectively mitigates this concern, while also capturing more images per second for a thorough diagnostic review of the small bowel.

• Higher Frame Rate

MiroCam®’s higher frame rate of 3 images per second significantly increases the chance of observing all findings as the capsule passes through the GI tract.

• Wider Field of View

MiroCam®’s precision lens system provides a 150 degree field of view, enabling exceptional visual coverage of the small bowel mucosa.

• Smaller Capsule Size

MiroCam®’s size of 11x24mm is easier to swallow.

• HBC (Human Body Communication)

The core technology behind the image data transmission is IntroMedic’s patented HBC technology.
MiroView™ 2.0

Advancements

The MiroView™ software platform has been significantly enhanced through new features and design, including interoperability with PACS systems and network support.

- **Enhanced Interface**: enables a faster, more comfortable user experience
- **Express View**: second generation quick view mode streamlines the review process
- **Range View & Map View**: innovative viewing modes assist with identifying GI landmarks
- **Reporting Tool**: Enhanced design and new features simplify the reporting process

MiroView™'s Review Mode is easy to use, enabling efficient and effective viewing of the GI tract.

The updated reporting tool has been simplified with advanced functions to enable fast and effective report creation.

MiroView™ List View enables Medical professionals to readily search, organize, manage and export patient cases.

MiroView™ Network System

MiroView™ Network readily integrates with hospital networks; enabling remote access for multiple users and PACS connectivity (supports DICOM).

MiroView™ Operator software enables streamlined management of the receivers, users, and system settings. Operator also supports simultaneous connection and management of multiple receivers. Operator is a separate software program included on the MiroView™ workstation.
1. Patient Preparation
- Prior to procedure physician informs patient of the preferred preparation.
  (ie. liquid diet / fasting / laxative preparation)
- Prepare MiroCam® Receiver
- Place sensor pads and receiver on patient

2. Capsule Ingestion
- Patient ingests capsule
- Patient informed of when water, food and medication can be taken for the duration of the procedure.

3. Image Capture
- Capsule is naturally passed through the GI tract while taking images. Images are captured for a minimum of 11 hours.

4. Review & Report
- Data is uploaded to MiroView™ workstation from the receiver.
- Physician reviews images and generates clinical report.
